(EVO)

### The Remanufacturing Process:

- ◆ GE Oil Coolers are remanufactured by first completely cleaning the unit.
- ◆ All internal passages are flushed with our proprietary system.
- ◆ All units are disassembled, all components are washed and individually inspected.
- ◆ Gasket surfaces are prepared for new gaskets.
- ◆ Bonnets are bead blasted and fully inspected for damage.
- ◆ Reassembly is completed using new O-rings and gaskets.
- ◆ A final pressure check is made on both the “oil” side and on the “water” side. Any leaking tubes are mechanically sealed as necessary.
- ◆ The oil cooler is then painted and skidded for shipment.
