The EngineAir Water Pump Remanufacturing Process:

- ◆ Water Pumps are remanufactured beginning with a complete disassembly and cleaning.
- ◆ All components are inspected and dimensional measurements are checked to OEM standards. Nonconforming parts are replaced.
- ◆ All pumps are rebuilt using new seals, gaskets, and bearings.
- ◆ Each completed pump is pressure tested for 45 minutes and visually inspected to ensure a one time installation.
- ◆ A visual inspection of the weep hole is done to check for any internal or external leaks.
- ◆ The water pump is then painted, bagged and skidded for shipment.
