#128 x 1692
#128 x 1693
#128 x 1779
#128 x 1780
#128 x 1877
#128 x 1878

The Remanufacturing Process:

- ◆ GE Intercoolers are remanufactured by first completely cleaning the unit.
- ◆ The next step involves visually inspecting the unit for leaks while applying pressure to the core. All identifying leaking tubes are mechanically sealed.
- ◆ If the number of sealed tubes exceeds the OEM standard for the maximum allowable number, a replacement center section is offered in the remanufacturing process.
- ◆ Upon completion of either process, a final pressure check is done.
- ◆ The intercooler is then completely dried, painted, wrapped and skidded for shipment.
